# ARMOURED MILITARY VEHICLES

OUR  
KONSTRUCTIONS  
IN MOTION

When safety is at stake, nothing can be left to chance. We at Ressenig are therefore dedicated to achieving top quality in all our safety features and subjecting the materials used to stringent endurance tests. Planning and development form an integral part of our work, which is why we use the latest applications and can tailor our products to customer specifications.

This complete cycle consisting of research & development, production, quality and service for the clients is an art practised with naturalness and approved constantly.

We consider ourselves to be a competent development partner from the concept up to the readiness for series production and as a flexible partner for production of prototypes, individual items and series productions.

Both competences are united under one roof to be flexible to react to the requirements and to give the client and end-user security through quality.

With excellent quality you drive safely ...

# ADAPTIVE PROTECTION KIT

Quality and Safety

# ADAPTIVE PROTECTION KIT

Changing requirements regarding the degree of protection and functionality need an optimal adaptability of the vehicle to all sorts of applications.

Our protection kits with building blocks allow an adaption of the protection level and consequently the greatest possible safety of the team during the active service in crisis areas and for peace-keeping.

The advantages of the greatest possible safety for the team in case of need and at the same time the advantages of the reduction of the running- and maintenance costs during normal operation in a protected vehicle are combined.

The company Ressenig develops, tests and produces adaptive protection kits for logistic- and leading vehicles. According to STANAG protection Levels.
